Finance: Assist the user with business or personal financial matters

Description

Cash notes is a financial assistant and outcome tracker designed to put you back in control of money. Users could conveniently record every bill record like a notebook and don't need to get their payment into a specific category. Users could easily add, update and search their records after selecting the specific day, month or year via the date picker. Besides, users could track their spent and earned amount in the form of bar charts on the chart view.

Cash notes mainly have two views, one is the overview to check your spent and earned and another is chart for bar chart visualization.

1. Overview

- Select the date you'd like to search via the datepicker within the popover view
- Check spent and earned records & amount after choosing the specific date
- Tapping into the specific record, user could revise and update their records
- User could add record with the button on the right top side of the view
- If user do not fill out the form but try to save it, the alert would pop up alerts to inform users to fill all fields up and then add this record
- After adding or updating records, these records would directly save to the core data and data is preserved even after reopening or restarting the app

2. Charts

- Select daily, monthly or yearly chart that user would like to get
- Select the specific day, month or year and this date would show on the chart view
- Visualize users' income and outcome history in the form of bar chart
